

Unique, dual-band Laser protection

High light transmission

Military-grade ballistic protection

Rugged and durable

Flawless optics

The LazrBloc GF-8: For Military, Tactical and Aviation Protection from Prominent Green Dazzler Lasers.

Around the world, reports of malicious laser strikes against law enforcement, the military, and pilots have spiked. In an instant, laser illuminations can cause vision-disruption, distraction, disorientation or even eye damage, and these dangers are amplified when every second counts. With both visible and invisible wavelengths contained in a concentrated beam, lasers pose a distinctive, stealthy threat to the human eye. Revision has developed a countervailing response to protect against green laser illuminations, which account for almost 95% of all laser events.

Revision's patented laser protective dye is used in the LazrBloc GF-8 Laser Protective Ballistic Lens. Uniquely, LazrBloc GF-8 lenses combine this advanced laser protection technology with Revision's storied military-grade ballistic protection.

KEY FEATURES

PRECISION DUAL-BAND LASER PROTECTION – Blocks up to 99.7% of 532 nm green laser energy, and stops 99% of hazardous 808 nm near-infrared (NIR) radiation, an invisible component of green lasers

SUPERIOR LIGHT TRANSMISSION & COLOR RECOGNITION – Formulated to enable the highest level of visible light transmission and color recognition to maintain mission critical situational awareness, achieving 50% photopic and 25% scotopic light transmission

INTERCHANGEABLE LENSES – Lenses made of indestructible, optical grade polycarbonate that can be interchanged quickly for various light conditions and provide 100% protection from harmful UV-A-B-C rays

BALLISTIC PROTECTION – High-impact polycarbonate lenses exceed military ballistic impact requirements

FLAWLESS OPTICS – Precision manufactured lenses ensure distortion-free vision

RUGGED DURABILITY – Eye protection that lasts, performs and protects through all the rigors of riot control, tactical and combat operations

ANTI-FOG – OcuMax® Plus is proven to be the #1 anti-fog and scratch-resistant coating in the world, and it resists a wide variety of chemicals, including DEET (available on StingerHawk and Exoshield Systems as well as Revision's Goggle lines)

MULTI-PLATFORM LENS AVAILABILITY – Manufactured for Revision's full slate of military and tactical spectacle and goggle lines
